Education

Sharda University — Greater Noida, India
B.Tech in Computer Science and Engineering (Specialization in AI & ML); CGPA: 7.5/10 — *2023 - Jun 2027*

Bishop Conrad School — Bareilly, India
Class XII (AISSCE): 86% Class X (AISSE): 93% — *2021, 2019*

Experience

Full Stack Developer Intern — Jun 2026 - Jul 2026
Siddhi Sarees Pvt Ltd — *Bareilly, India (Hybrid)*

- Fixed UI and product-page issues in a 10-12 person team rebuilding the site for international customers
- Saw orders tracked on WhatsApp, calls and sticky notes, so I built an order dashboard on my own initiative
- Wrote 48 end-to-end checks in Playwright against values computed separately in Python; they caught a time-in-stage chart reading zero for every stage, which I traced to the data and fixed

Freelance Web Developer — Mar 2024 - May 2024
Client project for a local craft store — *Noida, India*

- Built a mobile-first e-commerce site in HTML, CSS and JavaScript with category listings, a cart, order tracking and Razorpay checkout; showed it at the Sharda University tech fair

Projects

Order Analytics Dashboard | *JavaScript, Chart.js, Node.js, Python* — siddhi.harshnarain.me

- Tracks orders through 8 stages with live KPIs, a stage funnel and team workload; one filter drives it all
- Plain JavaScript, no framework; runs on 1,060 synthetic orders since customer data was confidential

Nihongo Path | *Next.js, TypeScript, Tailwind CSS* — nihongo.harshnarain.me

- Japanese course for Hindi speakers from kana to JLPT N4, with pronunciation in Devanagari, not romaji
- 43 lessons plus SM-2 spaced-repetition review built from them; I made it for my own study and use it daily

Budget Buddy | *JavaScript, Chart.js, GitHub Actions* — budget.harshnarain.me

- Expense tracker with a monthly budget, category breakdown and plain-language spending insights
- Calculation logic unit-tested apart from the UI; the tests run in GitHub Actions on every push

ShareTheMeal | *React, Vite, Vitest, GitHub Actions* — sharethemeal.harshnarain.me

- Food donation app with a four-step flow and food-safety pickup rules, e.g. cooked food within 6 hours
- Tested with Vitest and Testing Library; CI runs lint, tests and build on every push

Catching Silent Bugs in ML Training Code | *Python, PyTorch* — Research, paper under review

- Showed that test accuracy misses bugs that only corrupt gradients (AUC 0.515, chance); a per-layer gradient check catches them at AUC 0.991 over 21,415 runs

Technical Skills

Languages: Python, JavaScript, Java, SQL, HTML/CSS
Web and testing: Node.js, Flask, Chart.js, unit and end-to-end testing
Tools: Git, GitHub, GitHub Actions, Jenkins, MySQL, Linux (basic), AWS SageMaker, S3 and EC2 (coursework)
Machine learning: PyTorch, TensorFlow, scikit-learn, Hugging Face Transformers

Certifications and Activities

Certifications: Oracle Academy (Java Fundamentals, Database Design), HackerRank (Python, Problem Solving)
Hackathon: Top 5 finalist, AI Craft 2.1, Amity Centre for AI, Noida
Volunteering: TechBridge India Foundation (2023): ran 10+ weekend coding workshops for school students
